DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted Prior Art (APA) or EP'017 in view of Yang et al. and NPL (Lorene Baccaro).

The APA or EP'017 disclose a buffer tube for use in a fiber optic cable which comprise a blend or an alloy of polymer mixture materials which are not of HIPS and SBS as being recited in the claims of the present invention. However, the use of a blend or an alloy of different polymers as materials for buffer tubes are old and well known as being disclosed by NPL (Lorene Baccaro).

Yang et al. discloses that it is known to make a buffer comprising an alloy of polypropylene-polyethylene copolymer.

Therefore, it would have been obvious for one of ordinary skill in the art to construct or provide the buffer tubes of the APA or EP'017 out of an alloy of a polymer mixture consisting of HIPS and SBS in view of the teachings of Yang et al. and NPL.

NPL and Yang et al. provide the suggestions or motivation for using an

alloy of different polymers as materials for buffer tube construction to provide better mechanical, chemical and electrical properties.

Regarding the different volume percents of polymer mixture and values or ranges of flexural modulus are deemed obvious design choice through routine experimentation, optimum ranges and use of preferred material for achieving the desired results, *In re Aller*, 105 USPQ 233 (CCPA 1955).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hawtof and Yamamoto et al. are further cited to show optical fibers.
